

# JAKUB BUJAK

I am a web developer who specializes in creating full-stack applications, as well as websites and shops in WordPress. I work with React and Node.js, constantly learning new libraries and improving the quality of my code. I am looking for a job as a React Front-end Developer, Back-end Developer, or Fullstack Developer. I have several projects created commercially or as part of my studies.

### UX/UI Bootcamp

A course conducted by ING Hubs B.V in the field of UX and UI. As part of this course, we work on market research and application design, where the theme is "saving"

### Modern Web Apps Development

A course run by ING Hubs B.V, during which I learned how to create fullstack web applications. I got to know frameworks such as React, Vue.js, Next.js, Svelte, Express. The credit course requires designing an application for online courses.

### Modern React with Redux [2023 Update]

Course conducted by Stephen Grider on the Udemy platform, during which I get to know React, Redux, good practices in creating and designing applications.

### Front End Development Libraries

Course run by FreeCodeCamp. It includes the basics of React and Redux, Bootstrap, SASS and JQuery

### The Web Developer Bootcamp 2023

An online course conducted by Colt Steele on the Udemy platform, during which I learned the basics of creating fullstack applications. The biggest project in this course was creating an application for adding campsites along with user login.

### JavaScript Algorithms and Data Structures

A course conducted by FreeCodeCamp in the field of algorithms.

### Responsive Web Design

As part of the course, I refreshed my knowledge of HTML, CSS, responsive approach to creating websites and JS

### Tworzenie aplikacji na platformie Node.js

The course conducted by NobleProg Polska sp. z o.o. during which I learned the basics of Node.js and creating applications on the back-end side

### AZ-900 Microsoft Azure Fundamentals

A course conducted by Altkom Akademia, during which I got to know the Microsoft Azure platform and learned how to use and manage it.

## PROJECTS

**RunNation** - a full-stack application created as part of a university project, which is still being developed. It includes user login and registration, the ability to add comments, and a separate administrator panel.

Link to GitHub: <https://github.com/kuba-bujak/RunNation>

Technologies:

- React
- Express
- MongoDB - serverless
- Node.js

**YelpCamp** - a full-stack application created as part of a team project during university. It was partially developed while learning from a Udemy course. It includes user login and registration, the ability to add comments and campgrounds by users.

The entire application is containerized and hosted on the Cloud.
